

Get Started with TestCafe

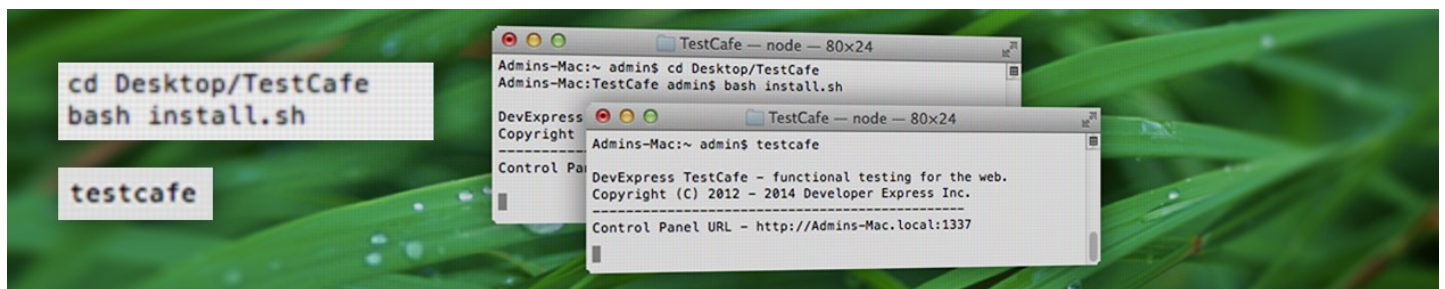

Unpack the Distribution File

Unzip the downloaded archive to a directory where you wish to store the program files.

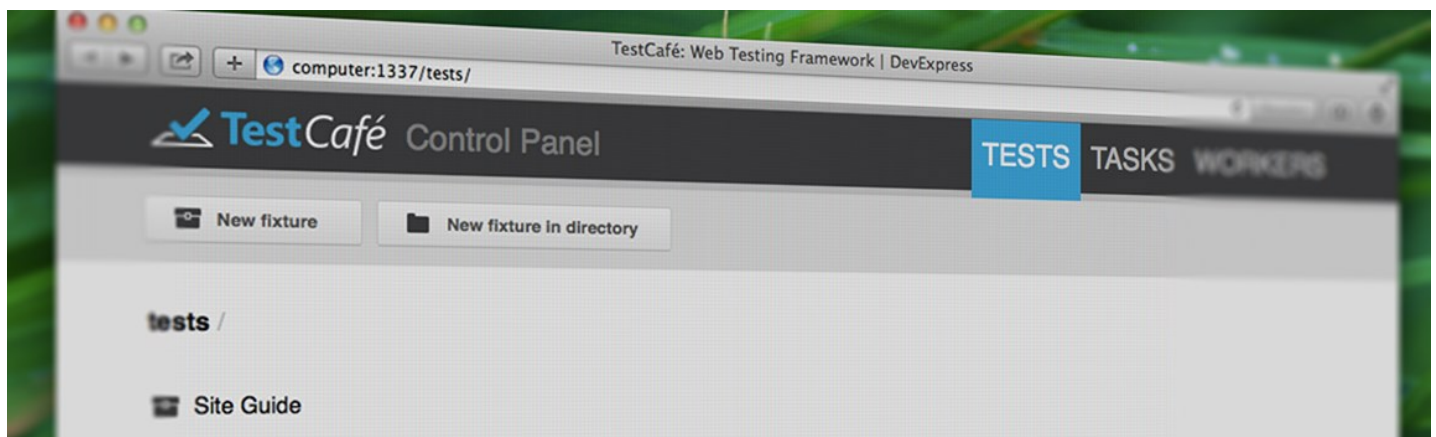

Launch the Testing Environment

In the Terminal, first execute the two commands below to install TestCafe. The testing environment will start in your default browser automatically. To run TestCafe at a later time, simply use the "testcafe" command.

Start Testing

TestCafe's Control Panel will launch within your default browser allowing you to create and execute your functional web tests.

Note that the TestCafe process continues to run even if you close your browser. To return to TestCafe's Control Panel, navigate to the URL displayed in the Terminal where you initialized the process. To end the TestCafe process, close the console.

To learn more and see how easy it is to create functional tests with TestCafe, visit <http://testcafe.devexpress.com/Documentation>.
